

Under Racking Kit SV50/URKIT

Our unique **Under Racking Kit**, allows for the simple use of SpaceVac at ground level - allowing fast and easy removal of dust and other materials from floors that would otherwise be inaccessible due to the presence of racking or built in machinery that would preclude traditional cleaning methods.

Built around a core of our 50mm poles to allow for maximum airflow and high-powered cleaning performance **EVERY** time.

The SpaceVac SpaceSuit is a brand new cleaning add-on designed to make the use of SpaceVac even more comfortable for operators.

The lightweight but durable support brace, spreads the weight of the system evenly across operators shoulders and backs to make even long, heavy duty cleans much more comfortable and with less strain on the back, neck and shoulders.

The system also includes a pair of prismatic glasses to allow operators to easily monitor progress of cleans without needing to look upwards - helping to avoid operators straining their neck and making SpaceVac even more comfortable to work with.

In addition to being compatible with any of the SpaceVac high-level cleaning systems in our range, the new Spacesuit is also compatible for use with any telescopic inspection or even high-reach, water fed window cleaning pole systems making it an attractive add-on to facilities managers who offer these additional services in their portfolio.
